

Ayoub Bouhnine

Cyber Security Incident Response Analyst

ayoub@bouhnine.com | linkedin.com/in/ayoub-bouhnine | github.com/bayoub03 | Brussels, Belgium | ayoub.bouhnine.com

EDUCATION

M.Sc. Cybersecurity

Université Libre de Bruxelles (ULB)

September 2022 — June 2024

Specialization: Digital Forensics & In-Depth Analysis

Thesis: Malware Obfuscation & Evasion — AVET

Framework Extension for CAPEv2 Sandbox Evasion

Grande Distinction

B.Sc. Computer Science

Université Libre de Bruxelles (ULB)

September 2019 — June 2022

Grande Distinction

CERTIFICATIONS

★ CompTIA Security+

August 2025

★ Blue Team Level 1 (BTL1)

February 2025

★ ISC2 Certified in Cybersecurity (CC)

March 2024 — March 2027

LANGUAGES

French Native
English Fluent (C1)
Dutch Elementary (A2)

ACHIEVEMENTS

- Grande Distinction — M.Sc. Cybersecurity, ULB, 2024
- Grande Distinction — B.Sc. Computer Science, ULB, 2022
- Finalist — CyberSecurity Challenge Belgium, 2023 & 2024

CTF & EXERCISES

Mastercard CyberDefense Exercise (CDX)

September 2025

Blue Team — Detection, hardening & infrastructure protection

CyberSecurity Challenge Belgium 2024

March 2024

Finalist

CyberSecurity Challenge Belgium 2023

March 2023

Finalist

PROFESSIONAL EXPERIENCE

Cyber Security Incident Response Analyst

Proximus Ada

September 2024 — Present

- Digital forensic investigations across Windows, Linux, macOS, and vendor appliances (Ivanti, Palo Alto, Fortinet)
- Multi-stage incident investigation end-to-end: initial access through lateral movement to impact
- EDR tooling and log correlation to reconstruct attack timelines and identify indicators of compromise
- Root cause analysis and actionable remediation guidance for clients and stakeholders

Internship CSIRT — Red Team

Proximus Ada

July 2023 — September 2023

- Security assessment of physical access control badge system (RFID/NFC cryptographic weaknesses)
- Enhanced Proxmark open-source tool for red team offensive workflows
- Participated in real-world red team engagement against production environment

SKILLS

DOMAINS

Networking Cybersecurity Incident Response Penetration Testing

THREAT INTELLIGENCE & ANALYSIS

MISP Recorded Future Cuckoo Sandbox CAPEv2 YARA

SIEM & EDR

Splunk Elastic Stack Security Onion MDE CrowdStrike SentinelOne

DETECTION ENGINEERING

Sigma Rules Sysmon

SECURITY TOOLS

FortiGate Cisco pfSense Suricata Snort MDO 365 Blue Coat

PROGRAMMING & SCRIPTING

Python C/C++ Java PowerShell Bash PHP SQL

INFRASTRUCTURE & VIRTUALIZATION

Proxmox Azure

FRAMEWORKS & METHODOLOGIES

MITRE ATT&CK NIST IR Lifecycle PICERL Cyber Kill Chain Diamond Model

PROJECTS

Attacking & Defending a Network Topology

19/20

Python Scapy Mininet nftables

Network security lab implementing port scanning, FTP brute-force, DDoS, and ARP cache poisoning attacks with nftables-based defense mechanisms on a Mininet topology.

DNS Traffic Host Classifier

20/20

Python scikit-learn tcpdump DNS Analysis

ML pipeline classifying network hosts as human, bot, or mixed from DNS traffic traces using decision trees, random forests, neural networks, and KNN.

Malware Obfuscation & AVET Extension for CAPEv2 Evasion

16/20

C Shell Python AVET Syswhispers

Extended AVET framework with stageless Meterpreter payloads, dynamic API/NTAPI loading, direct syscall execution (Syswhispers2/3), and custom arithmetic encryption.

Archive Format Fuzzer

20/20

C Makefile Fuzzing

Custom fuzzer targeting archive extraction routines; discovered vulnerabilities across multiple architectures including M1 and x86_64.
